

Introducing the LMXT: America's Next Strategic Tanker

September 17, 2021

Lockheed Martin Offers the LMXT for the U.S. Air Force's KC-Y Program

MARIETTA, Ga., Sept. 17, 2021 /PRNewswire/ -- Lockheed Martin [NYSE: LMT] introduces the LMXT as America's next strategic tanker — built in America by Americans for Americans. Offered in response to the U.S. Air Force's KC-Y Program, the LMXT represents the newest chapter in Lockheed Martin's 60+ year history of producing and delivering tanker and cargo aircraft for the U.S. Air Force, U.S. Marine Corps, U.S. Navy and multiple operators around the world.

The LMXT complements the U.S. Air Force's tanker capabilities by providing the most advanced aerial refueler to meet America's immediate and long-term mission requirements. The LMXT strengthens and expands the U.S. aerospace industrial base by working with existing and new American suppliers. The LMXT also cultivates and sustains high-tech, high-skill American manufacturing jobs.

"Lockheed Martin has a long and successful track record of producing aircraft for the U.S. Air Force, and we understand the critical role tankers play in ensuring America's total mission success," said Greg Ulmer, executive vice president, Lockheed Martin Aeronautics. "The LMXT combines proven performance and operator-specific capabilities to meet the Air Force's refueling requirements in support of America's National Defense Strategy."

The LMXT offers a proven airframe with distinct U.S. Air Force-only capabilities designed to meet operator requirements, with advantages that include:

- Significantly improved range and fuel offload capacity
- A proven fly-by-wire boom currently certified and used by allies to refuel U.S. Air Force receiver aircraft in operations around the world
- The world's first fully automatic boom/air-to-air refueling (A3R) system
- Operational and combat proven advanced camera and vision system
- Open system architecture JADC2 systems
- A multi-domain operations node that connects the LMXT to the larger battlespace, increasing onboard situational awareness to provide resilient communications and datalink for assets across the force

The Lockheed Martin strategic tanker builds on the combat-proven design of the Airbus A330 Multi Role Tanker Transport (MRTT). As the prime contractor, Lockheed Martin works directly to implement U.S. Air Force-specific requirements within the LMXT. As the strategic tanker of choice for 13 nations, the MRTT has logged more than 250,000 flight hours refueling U.S. and allied fighter, transport and maritime patrol aircraft in combat theater environments.
